

Trigonometric Identities

Callum O'Brien

$$\tan \theta = \frac{\sin \theta}{\cos \theta}$$

$$\sin^2 \theta + \cos^2 \theta = 1$$

$$\sin (\theta \pm \phi) = \sin \theta \cos \phi \pm \cos \theta \sin \phi$$

$$\cos (\theta \pm \phi) = \cos \theta \cos \phi \mp \sin \theta \sin \phi$$

$$\sin (2\theta) = 2 \sin \theta \cos \theta$$

$$\cos (2\theta) = \cos^2 \theta - \sin^2 \theta = 2 \cos^2 \theta - 1 = 1 - 2 \sin^2 \theta$$

$$\tan (2\theta) = \frac{2 \tan \theta}{1 + \tan^2 \theta}$$

$$\tan^2 \theta + 1 = \sec^2 \theta$$

$$\cot^2 \theta = \csc^2 \theta$$
